

OQVerify5 Upgrade Available

OQSG is proud to announce OQVerify5 – our newest software upgrade! OQVerify5 will ease the burden of operator qualification by providing many new features such as online access, and a training, knowledge, and skills management feature.

OQVerify5 provides a new online version that is identical to the current computer version. In fact, our online version has the same screen format of the computer-version that alleviates all concerns and needs for additional education. Converting from the computer-based version is quick and easy. It requires no downloads, installations or copying of drivemap files. Also, because it is online, you get the added benefit of being able to logon to your account anywhere you have Internet access.

The new training, knowledge, and skills management feature allows administrators to manage a skills assessment as a knowledge assessment. Pre-populated evaluation forms are included that can be scheduled, accessed, and printed. All records are available to the administrator through the Report Manager of our software.

Other benefits of upgrading to the online system include:

- Daily uploads to ISNetworld for OQSG and Owner Validated ISNetworld customers
- Smart credit and active user tracking that alleviates the need for ordering credits
- Enhanced multimedia training with live action videos, 2D and 3D graphics, and narrative component
- Free upgrade for existing OQVerify customers

OQSG remains committed to easing the burden of Operator Qualification through great products and services. Contact us at 337-769-9608 for demo accounts, upgrading information, and questions.
